

What is the keywords Meta Tag?

What is the keywords Meta Tag?

[Back to Top](#)

Keywords is a name for the terms people type into search engines when searching for something. For example, if you were looking for sites about Donald Duck, you would go to a search engine and type in the words "Donald Duck". The search engine then searches it's databases for sites that contain those words and then it displays a list of those sites. The Keyword tag is part of our search engine optimization services.
